Webinar: What would you do? Clinical supervision dilemmas in medicine and dentistry

Time to complete: 2 hours

Clinical supervision is essential for supporting trainee development and maintaining safe patient care. When an adverse outcome occurs, questions may arise about the responsibilities of the trainee, supervisor, and organisation.

In this Reviewing Performance Activity, you will analyse a hypothetical supervision-related medicolegal incident using a structured critical incident review framework. You will examine the factors that contributed to the outcome, consider the medicolegal implications, and reflect on how similar risks may arise in your own practice.
